

391004119093201 Local number 108 N15 E25 11DCAC1

Basin and Range basin-fill aquifers

Lyon County, NV

LOCATION.--Lat 39°10'29.8", long 119°09'05.2" referenced to North American Datum of 1983, in SW ¼ SW ¼ sec.11, T.15 N., R.25 E., Lyon County, Hydrologic Unit 16050303.

GROUND-WATER RECORDS

WELL CHARACTERISTICS.--Depth undefined. Upper casing diameter undefined; top of first opening undefined, bottom of last opening undefined.

WELL USE.--Withdrawal well.

DATUM.--Land-surface datum is 4318 ft above National Geodetic Vertical Datum of 1929. Measuring point: 2-in steel port, north side of casing, 0.1 ft above land-surface datum.

REMARKS.--Walker Lake is a perennial, natural terminal lake that became at-risk because of upstream agricultural diversions. Between 1882 and 1994, upstream diversions caused Walker Lake to decline about 140 feet and the total dissolved solids (TDS) concentrations to increase from 2,500 mg/L to 13,300 mg/L. The Lahontan cutthroat trout (LCT), a threatened species that is native to Walker Lake, has adapted to the high TDS of terminal basins. However, diversions have lowered lake levels and increased TDS to concentrations that threaten the survival of the LCT. The objectives of this project are to develop (1) an improved water budget for Walker Lake and (2) the capability to predict how changes in irrigation practices in and below Mason Valley will affect flows in the lower Walker River so alternatives for supplementing flows can be evaluated.
